

# Hunter Trauma Kit

## Ballistic Response Pack advanced

When a hunter is involved in any type of traumatic injury, it is essential that they have the necessary items to render aid to themselves or another hunter. The TMS Outdoors Hunter's Trauma Kit- BRP contains the components necessary for a hunter to provide treatment to gunshot wounds as well as other types of trauma associated with hunting accidents.

The BRP comes equipped with a SOF®TT-W tourniquet, Tramedic Bandage and Petro Gauze as well as a minor injury sub-kit. This compact, one-hand accessible, MOLLE adaptable pouch is ideal for storage on individual equipment, an ATV or attached to a tree stand. Its contents were selected for ease-of-use and effectiveness. Furthermore, the slightly larger pouch allows a hunter the ability to add other amenities to the kit.

In addition to the standard components, the advanced model comes equipped with a hemostatic dressing which allows for faster hemorrhage control and can also aid in treating bleeding in areas where a tourniquet cannot be applied.
