

Hunter Trauma Kit – Operator

Designed to mirror the same IFAK (Individual First Aid Kit) that we carried in Iraq and Afghanistan, the Hunter Trauma Kit- Operator is a compact kit that provides life-saving capabilities in a compact, streamlined design. The contents allow for the effective treatment of injuries commonly associated with severe trauma without taking up excess space on individual equipment. Its well laid out interior and full zip opening allow rapid easy access to all components.

The kit contains the SOF®TT-W tourniquet, Tramedic Bandage and Petro Gauze. These three components treat life-threatening hemorrhage, severe lacerations and penetrating chest injuries caused by gunshot wounds, knife accidents, animal attacks or tree stand falls. Do not trust your life to a simple first aid kit full of small adhesive bandages, antibiotic cream and tape. Carry the same trauma components carried by top U.S. Special Operations Forces and elite Tactical Teams. The kit also includes a minor injury sub-kit.
