

Simplified Automated Ventilator (SAVe)

The SAvE is an automated BVM that delivers an AHA compliant tidal volume of 600 mL at 10 BPM for 5 hours. This frees up the medic to give compressions, start fluids, treat other injuries or ready the patient for transport. A single on/off switch eliminates the guesswork and operator error associated with BVMs and overly sophisticated transport ventilators. The SAvE has been in use on the battlefield since 2007.

PRODUCT ATTRIBUTES

- Easy-to-use, hands-free and single knob operation
- Accepts supplemental O2, powered by battery or outlet
- Use anywhere
- Elevates standard of care
- Improves triage capabilities
- Extremely easy to use
